Job Description

Primary Purpose of Position

The employee will take a leading role in constructing an integrated social-economic-environmental impact modeling framework that will provide linkages and interactions with poultry producers, consumers, supply chain system, socio-economic models, and environmental impact (water, soil, climate) models using multi-agent simulation methods to estimate and project cost, benefit, and other effects of restricted antibiotic treatments in poultry operations. The project is funded by USDA Sustainable Agricultural Systems (SAS) grant 2020-69012-31823, NCA&T Banner 20-0103.

Primary Function of Organizational Unit

The employee will have already acquired a Ph.D. or equivalent acceptable degree and should be able to exercise scientific judgment on a day-to-day basis. The employee will evaluate incoming information in the form of experimental data and observations, written literature documentation, and oral
